

OAXACA, MEXICO 2022 VISION TRIP

DATES: SEPTEMBER 25-30TH

WHAT IS A VISION TRIP?

Join us as we experience firsthand Plant With Purpose's life-changing work amongst rural farming communities. This Vision Trip to Oaxaca will be a unique opportunity to gain understanding of Plant With Purpose's life-giving programs in Mexico and the challenges faced by rural farming families. With the chance to meet both local staff and community members, vision trips provide an in-depth and hands-on learning experience, focused on the social, spiritual, economic, and environmental issues facing rural farming families today.

ROSA'S STORY

Rosa, partnering farmer in Oaxaca pictured above in her Purpose Group, shares how Plant With Purpose programs changed her life:

"Because of poultry training, my chickens grew and we were able to eat and sell them. We planted vegetables like cilantro, radishes, and lettuce, which I sold, and with that I was able to support myself. Because of the work that I have done with Plant With Purpose, I have become a better person and my eyes have been opened. It's like I woke up and learned to defend myself. I live happily and I am calmer. I talk with my family and they tell me there are setbacks in life, but I can choose to move forward. Ultimately, it is God who comes first, and thanks to Him, I have this community. We all do our part; what little we can give, we give to each other."

COST: \$700 PER PERSON, PLUS AIRFARE

EXPERIENCE

Experience what it is like to walk alongside rural farming families.

EXPLORE

Explore the causes and effects of poverty and Plant With Purpose's lasting solutions.

EQUIP

Equip yourself with the skills and knowledge to create positive change that won't end when you return home.

ABOUT OAXACA, MX

Plant With Purpose works in three of the most impoverished states in Mexico including Chiapas, Oaxaca, and Puebla. In Mexico, almost 42% of the population lives below Mexico's national poverty line (UNDP 2021). For the primarily indigenous groups with whom we work, families depend on smallholder agriculture to meet nutritional and economic needs. Of indigenous peoples in Mexico, over 80% are considered to be extremely poor (UN 2015). Indigenous communities are often marginalized, making them more vulnerable to environmental degradation, further exacerbating their cycle of poverty.
